Hey Thelma
I'm available that entire week except for Tuesday afternoon and all day on Friday. If you'd like to have me be at the meeting and not just on the phone, then my availability is Wed after 10AM or Thursday anytime.
Thanks.
Alex Rosenberg
EPA Region 1

Subject: Perley's

Jeff,

Mark and I visited Perley's marina on August 3, 2017. We met with Paul Richard and David LaChance from AMEC, Perley's consultants. We did the visit at the request of Mr. Richard following EPA's June 22, 2017 determination that the facility required a MSGP for its stormwater discharges. He specifically asked for EPA's assistance to identify the point source from the facility in order to conduct the sampling required by the MSGP. Since the time of the report which EPA based its determination on, the facility has undertaken additional BMPs to address stormwater management including regrading and installation of gravel along exposed soils including the swale which runs behind the maintenance garage and along the side of the marsh. Neither Mark nor I were able to identify a location which we could call a "point source." Any overflow of stormwater from the swale would most likely flow as sheet flow rather than a clearly defined point source. We left the site saying we needed to have further in house discussions. We, Mark and I, would like to talk with you about this. How does sometime during the week of the 28th look?

Thanks,

Thelma
